Course / Section: CPE408A / CPE22S2	Instructor: Engr. Adrian Dave E. Ignacio
LABORATORY ACTIVITY NO. 3.3	
DESIGNING A STUDENT ENROLLMENT PORTAL	
1. Objective(s):	
To design and build a functional, user-friendly front-end interface for a Student Enrollment System using HTML and CSS.	
2. Intended Learning Outcomes (ILOs):	
At the end of this laboratory activity, students should be able to: 1. Create a multi-section form using appropriate HTML5 tags and input types. 2. Organize numerous data fields into a professional grid using CSS. 3. Apply front-end rules to ensure all "required" boxes are filled correctly. 4. Implement version control treating the activity as a professional production project.	
3. Materials:	
• Desktop or laptop computer (Windows/macOS/Linux) • Node.js and npm installed • Visual Studio Code • Web browser • React development environment	
4. Instruction:	
ADEi University Digital Registrar Overhaul The University Registrar needs a digital makeover. Your task is to build the Registration Page where new students will submit their personal, academic, and contact details. Since this is a formal government and institutional record, the form needs to be comprehensive—meaning lots of data fields (boxes)! Phase 1: The Blueprint (Wireframing) Before coding, you must plan your layout. A good form is organized into logical sections so the user doesn't get overwhelmed. Requirements for your design: 1. Personal Information Section - Name (First, Middle, Last, Suffix) → Boxes - Date of Birth → Calendar Picker - Gender → Dropdown (Male, Female, Non-binary) - Nationality → Dropdown - Religion → Boxes 2. Contact Details Section - Email Address → Boxes	

Mobile Number → Boxes

Landline → Boxes

Complete Home Address (Street, Barangay, City, Province, Zip Code) → Boxes

3. Academic History Section

Grade School Name → Boxes

Year Graduated → Boxes

Grade School Address → Boxes

Junior High School Name → Boxes

Year Graduate → Boxes

Junior High School Address → Boxes

Senior High School Name → Boxes

Year Graduate → Boxes

Grade Average → Boxes

Senior High School Address → Boxes

4. Enrollment Choices

Academic Level → Radio

Semester → Radio

Campus → Radio (Manila, Quezon City)

College Department → Dropdown

Degree Program → Dropdown

Undergraduate Program

1. College of Engineering and Architecture

- BS Architecture
- BS Chemical Engineering
- BS Civil Engineering
- BS Computer Engineering
- BS Electrical Engineering
- BS Electronics Engineering
- BS Industrial Engineering
- BS Mechanical Engineering

2. College of Computer Studies

- BS Computer Science
- BS Data Science and Analytics
- BS Entertainment and Multimedia Computing
- BS Information Technology

3. College of Business Education

- BS Accountancy
- BS Accounting Information System
- BS Business Administration
 - Financial Management
 - Human Resource Management
 - Logistics and Supply Chain Management

- Marketing Management

4. College of Arts

- Bachelor of Arts in English Language
- Bachelor of Arts in Political Science

Graduate Program

1. Doctorate Degrees

- Doctor in Information Technology
- Doctor of Engineering with Specialization in Computer Engineering
- Doctor of Philosophy in Computer Science

2. Master's Degrees

- Master in Information Systems
- Master in Information Technology
- Master in Logistics and Supply Chain Management
- Master of Engineering with Specialization in Civil Engineering
- Master of Engineering with Specialization in Computer Engineering
- Master of Engineering with Specialization in Electrical Engineering
- Master of Engineering with Specialization in Electronics Engineering
- Master of Engineering with Specialization in Industrial Engineering
- Master of Engineering with Specialization in Mechanical Engineering
- Master of Science in Computer Science

Phase 2: Building the Structure (HTML)

1. The Container Tags (The Wrapper)

These tags organize your boxes into logical groups:

- `<form>`: The main container for all your input data.
- `<fieldset>`: Used to group related boxes (e.g., all Academic History boxes).
- `<legend>`: Provides a caption for each fieldset.
- `<label>`: The text that tells the student what to type in the box.

2. Field-Specific HTML Tags

Personal Information Section

- Name (First, Middle, Last, Suffix): `<input type="text">`
- Date of Birth: `<input type="date" onkeydown="return false">` (The code ensures click-only interaction).
- Gender: `<select>` with `<option>` tags for Male, Female, and Non-binary.
- Nationality: `<select>` with various `<option>` tags.
- Religion: `<input type="text">`

Contact Details Section

- Email Address: `<input type="email">`
- Mobile Number: `<input type="tel">`
- Landline: `<input type="tel">`
- Home Address (Street, Barangay, City, Province, Zip Code): Multiple `<input type="text">` tags.

Academic History (GS, JHS, SHS)

- School Names & Addresses: `<input type="text">`
- Year Graduated: `<input type="number" min="1900" max="2026">`
- Grade Average: `<input type="number" step="0.01">`

Enrollment Choices

- Academic Level: `<input type="radio" name="level">`
- Semester: `<input type="radio" name="semester">`
- Campus: `<input type="radio" name="campus">`
- College Department: `<select>` and `<option>`
- Degree Program: `<select>` and `<option>`

TAKE NOTE: Don't forget the `<label>` tag for every box. A box without a label is just a mystery square!

Phase 3: Styling the Interface (CSS)

A single-column form is not acceptable for this volume of data.

- 1. Grid System:** Use display: grid; to align boxes. For example, the "Name" row should be divided into four columns.
- 2. Visual Feedback:** Use the `:focus` pseudo-class to highlight the active box with a distinct border color (e.g., outline: 2px solid #007bff;).
- 3. Responsiveness:** Use Media Queries to ensure the grid shifts from 3–4 columns on desktop to 1 column on mobile.

GitHub Submission Workflow

You must treat this as a professional production project.

- **Initialize:** Create a public repository named enrollment-ui-design.
- **Commit History:** You must show your progress with at least 3 meaningful commits:
- **feat:** initial html structure and fieldsets
- **style:** implement css grid layout and focus states
- **fix:** add date constraints and final validation

Table 1. Deliverables

Feature	Requirement
Input Variety	Use at least 5 different input types (text, email, tel, date, radio).
Validation	Mark essential boxes (like Name and Email) as required .
Visual Hierarchy	Use headers (H2, H3) to distinguish sections.
Button	A clear "Submit Registration" button at the bottom.

5. Output:

Commits

main

All users

All time

Commits on Feb 12, 2026

changed validation for phonenumber/landlines to only accept numbers

9949492

reycxz committed 2 minutes ago

changed colors, borrowed primary colors used in tip manila logo

3bf1ba1

reycxz committed 26 minutes ago

created validation for inputs especially if it requires numbers only or letters only

17d750c

reycxz committed 28 minutes ago

changed color combination to match TIP manila color combinations

5c18d79

reycxz committed 37 minutes ago

fix: add date constraints and final validation

34ab65a

reycxz committed 47 minutes ago

style: implement css grid layout and focus states

e603b04

reycxz committed 48 minutes ago

feat: initial html structure and fieldsets

5ce426f

reycxz committed 51 minutes ago

6. Assessment (Rubric for Activity):

Criteria	Unsatisfactory 1	Satisfactory 2	Exemplary 3	Score
Organization of Documentation	Documentation is poorly organized, difficult to follow, or incomplete. File names, structure, or formatting are confusing or inconsistent.	Documentation is generally organized but may have minor issues in clarity, formatting, or file structure. Some parts may need better explanation.	Documentation is very well organized, clear, and easy to follow. Code files are properly named and structured. Comments and formatting are consistent.	
Completeness of Outputs	Several required outputs are missing or not functional. The web page does not work as intended or shows major errors.	Most required outputs are present and functional, but some features are missing, incomplete, or have minor errors.	All required outputs are present and fully functional (HTML, CSS, and JavaScript). The web page works as intended with no errors.	
Other comments/observation:	Total Score			
	RATING = $\frac{(\text{total score})}{6} \times 100\%$
